## PubSCIENCE provides one-stop shopping

ubSCIENCE, a new web-based tool, is now available to scientists, researchers and the public. It provides access to the vast body of DOE-related information published in scientific and technical journals without wading through multiple web sites, publications and references

PubSCIENCE is considered a

"first" in the scientific community because it allows users to search, at no charge,

across thousands of bibliographic citations from multiple journal sources to identify DOE-related information. Its

focus is on the physical sciences and other energy-related disciplines. Once a search identifies information, a link delivers the user directly to the publisher's site where full text is made available by the publisher, or through subscription, site license or pay-per-view options.

Journals available at PubSCIENCE include DOE scientific discoveries, as well as those with additional relevant information. Also available are journal citations from DOE's Energy Science and Technology database, which dates more than 25 years.

Full-text of DOE reports is also available on the DOE Information Bridge at **www.doe.gov/bridge**.
